SUMMARY

Full-Stack Engineer with 3.9+ years of experience in distributed systems that handle 150M records. Designed robust systems with asynchronous processing, microservices architecture using Java, Kafka, Redis, and Spring Boot. Strong in system design and problem-solving (500+ Leetcode problems) with published paper in Springer-Nature.

EXPERIENCE

Software Engineer

July 2022 – Present

LTM

Pune, India

- Improved observability and reduced pod overhead for a distributed ETL system processing **30K+** jobs/month by building centralized logging on AKS, streaming live logs via Kubernetes APIs and storing completed logs in Elasticsearch using Fluentd.
- Reduced Snowflake monitoring overhead by **94%** by implementing an adaptive backoff strategy for watcher queries on long-running (7-hour) ELT post-hook jobs, cutting query volume from ~2500 while maintaining execution visibility.
- Automated orchestration of 600+ Spectra ELT flows processing **150M+** records/week by enabling external triggering via TIVOLI scheduler, building a secure shell-based integration using Keycloak authentication to invoke platform APIs.
- Enhanced column naming logic in the React-based Dag-frontend service to ensure unique output names across sequential operations, considering both input columns and previously generated outputs for avoiding data inconsistency issues.
- Implemented new API to surface project member access in React-based Console-frontend service, improving visibility of collaboration details alongside project's key metadata like activity and sharing controls.

PROJECTS

Pocketter - Social Media Platform

- Designed a scalable distributed social-media feed system (Twitter-like) capable of supporting large-scale read-heavy workloads using microservices architecture.
- Implemented fan-out-on-write, considering non-celebrity accounts with moderate followers, ensuring event-driven architecture using **Kafka** for new Posts.
- Reduced latency for timeline generation by **98%** to ~46ms using **Redis** caching.
- Centralized user-authentication and Zero-trust authorization at service level using JWT.

Spending Insights - Full Stack

- Built Full-Stack application for tracking monthly expenses and getting categorized insights.
- Capable of processing reports with 10,000+ transactions per request, grouping them in categories.
- Tech.: Java, Spring-Boot, React, Javascript, jwt, Mysql, Docker

EDUCATION

IIT Guwahati

8.89/10

Master of Technology

2022

PCCOE, Pune

8.08/10

Bachelor of Engineering

2019

TECHNICAL SKILLS

Language: Java, JavaScript, Python, C++

Framework: Spring Boot, React

Distributed Systems: Kafka, Redis, RabbitMQ

Cloud & Infra: Docker, Kubernetes, AWS (S3, EMR, EC2), Azure (AKS), CI/CD (Github Actions, Jenkins)

Data & Observability: PostgreSQL, MySQL, Elasticsearch, Spark, MongoDB, Fluentd, Graphana, Kibana

Tools & Testing: Git, Maven, JUnit, Mockito, Postman, Airflow, Azkaban, Swagger, Github Copilot

Core Concepts: OOP, Data Structures & Algorithms, System Design (HLD, LLD), SOLID, Design Patterns

ACHIEVEMENTS

Competitive Coding Platform

Solved **500+** problems on Leetcode, 2026

Leetcode

Ninja Prestige, Coding Ninjas 2021

Secured **75th** rank in a coding competition held at IIT Guwahati

Certificate

Conference Paper, Springer-Nature

Published conference paper (2023) on Deep Learning in FEM simulations

Springer

GATE Exam 2020

Scored **98.67** percentile in national level examination among 137k+ candidates

General Championship 2022 - Winner

Won annual badminton inter-hostel tournament at IIT Guwahati

Zest 2016 - Winner

Won national level badminton tournament for engineering students

Certificate
